

RECOGNISED AS LEADERS IN  
STANDBY POWER SOLUTIONS

## Environmental Policy Statement

At PB Design and Development Ltd we are committed to minimising our impact on the environment and preventing pollution. We intend to meet, and if possible exceed, all legal and other compliance requirements. We recognize this approach is sound business sense and are therefore motivated to continually improving our environmental performance.

Our activities involve the design, manufacture, supply, installation, commissioning and servicing of standby power equipment, along with other associated bought-in products. The most significant environmental aspects of our Business include waste management, carbon emissions and emergencies. These provide a focus for our improvement plans.

Segregation of waste has enabled us to recycle, and sometimes re-use or recycle most of our waste including batteries and Waste Electrical & Electronic Equipment (WEEE). Consequently, we have minimised the amount of residual waste, which is incinerated and converted into energy or construction materials, rather than sent to landfill.

Our net CO<sub>2</sub> emissions from electricity in 2017 were Zero. In 2018 we aim to consume 100% green electricity, as well as generate solar electricity and offset Co<sub>2</sub> emissions from Gas consumption achieving 20% or better of the benchmarked 2003 consumption.

We are registered as a carrier of controlled waste, waste storage operation, and UK battery producer. We are also members of a WEEE Compliance Scheme. See "About us" at [www.pbdesign.co.uk](http://www.pbdesign.co.uk).

The Company has an Environmental Management System (EMS) which is certified to ISO14001:2015, within scope are all onsite and offsite activities of P B Design and Developments Limited.

Our objectives for the year of 2018 are: -

1. To achieve net electricity consumption of nil after off-setting our solar generation.
2. To maintain "normalized" gas consumption (indexed by degree days and production space) at 20% or less of the 2003 levels. With a stretch objective of achieving net zero emissions through offsetting green electricity consumed.
3. To maintain our vehicle footprint (official combined CO<sub>2</sub> emissions plus 15% x annual mileage) in the year at or below 7.5 tonnes of CO<sub>2</sub> per vehicle.
4. To reduce future product environmental impact through Life Cycle Analysis of our new digital charger.

Our Directors convene regular meetings to ensure that our EMS is effective. Each year this Environmental Policy Statement along with our EMS is formally reviewed by the Director and others at a Management Review Meeting. The Managing Director has overall responsibility for environmental matters within the Company.

This Policy has been communicated to all employees and is available to the Public. Our employees are also given the necessary information and training and held responsible for complying with this Policy.

Mark Crocker  
Managing Director
