

RECOGNISED AS LEADERS IN
STANDBY POWER SOLUTIONS

Environmental Policy Statement

At PB Design and Development Ltd we are committed to minimising our impact on the environment and preventing pollution. We intend to meet, and if possible, exceed all legal and other compliance requirements. We recognize this approach is sound business sense and are therefore motivated to continually improving our environmental performance.

Our activities involve the design, manufacture, supply, installation, commissioning and servicing of standby power equipment, along with other associated bought-in products. The most significant environmental aspects of our Business include waste management, carbon emissions and emergencies. These provide a focus for our improvement plans.

Segregation of waste has enabled us to recycle and re-use our waste, including batteries and Waste Electrical & Electronic Equipment (WEEE). Consequently, we have minimised the amount of residual waste, which is incinerated and converted into energy or construction materials, rather than sent to landfill.

Our net CO₂ emissions from electricity in 2018 were zero due to the solar installation on our factory and efficiency improvements. In February 2019 all our gas will be moved to a "100% green" tariff produced from sewerage waste, thereby moving towards zero site emissions.

We are registered as a carrier of controlled waste, waste storage operation, and UK battery producer. We are also members of a WEEE Compliance Scheme. See "About us" at www.pbdesign.co.uk.

The Company has an Environmental Management System (EMS) which is certified to ISO14001:2015, within scope are all onsite and offsite activities of P B Design and Developments Limited.

Our objectives for the year of 2019 are: -

1. To sustain nil CO₂ emissions from our electricity consumption during the year.
2. To achieve less than 2 tonnes CO₂ emissions from our gas consumption during the year.
3. To maintain our vehicle footprint in the year at or below 5.75 tonnes of CO₂ per vehicle.
4. To complete a Life Cycle Analysis of our new switch mode charger.

Our Directors convene meetings to ensure that our EMS is effective. Each year this Environmental Policy Statement along with our EMS is formally reviewed by a Director and others at a Management Review Meeting. The Managing Director has overall responsibility for environmental matters within the Company.

This Policy has been communicated to all employees and is available to the Public. Our employees are also given the necessary information and training and held responsible for complying with this Policy.

Mark Crocker
Managing Director
